SHARPE MIXERS NEWSLETTER, AUGUST 2011

New Web store is open for business

We are proud to announce the NEW Sharpe Mixers web store! Visit us at www.sharpemixersstore.com for all your portable mixer-part needs, 24/7!

You may purchase motors, gearboxes, shafts, impellers, rebuild kits and more. We will be continually expanding our product line, so be sure to bookmark us for future visits.

You may also visit [our main web site](#) for brochures, manuals and other product literature.

A look at what you'll find:

Portable impellers

Marine-style propellers, HYF-218 impellers and folding propellers

Motors

TEFC, White Washdown Duty, Stainless Washdown Duty and Air

Portable parts

Parts for Sharpe D-Series, G-Series, F-Series and T-Series mixers

Excluder seal kits

Multiple shaft sizes in both EPDM and Viton material

Portable mixer shafts

0.75", 1.0" and 1.25" diameter standard shafts for Sharpe portable mixers

Say “hola” to our new Spanish brochures

BY FRED DEICICCO
NATIONAL SALES MANAGER

[Sharpe Mixers](#) is working to expand sales into Mexico, Central America and South America.

Years of success in Puerto Rico and the Dominican Republic have prompted this market effort.

We have contracted with Inventec S.A. de C.V. to represent our products and services in Mexico, and we're expanding our sales representation in South America.

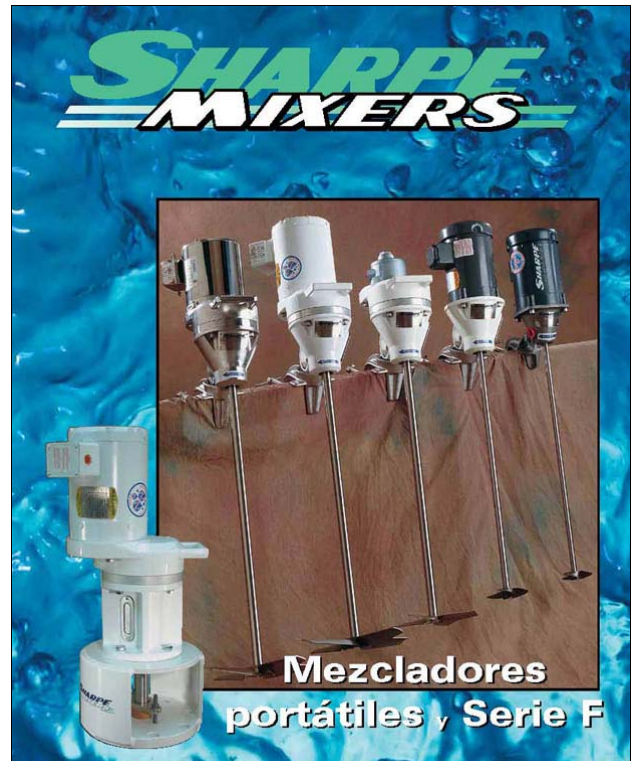

Our efforts to date have been very successful. Sales in Mex-

ico are growing rapidly.

Project work in the mining industry in South America is on the upswing, with one very big order landed in Peru last year.

Our growing market in Spanish-speaking areas has motivated us to start publishing all our literature in Spanish.

Starting with our [Portable Mixers](#) brochure and [Mixers 101](#), our two most popular publications, we will continue to expand our library of Spanish-language literature. And you'll see a Spanish version of our website in the future.

On our blog

At www.sharpemixers.blogspot.com, you'll find:

- A video glimpse of our [Explosives Process Mixer](#), made for the U.S. Army.
- Video of the new [M5 quick clamp](#) system. Portable mixer mounts will never be the same. Put those old-school wrenches away — you don't need them anymore!

Top-quality mixers are our top priority

BY DON GEYER
CUSTOMER SERVICE MANAGER

The Sharpe Mixers name represents the highest quality in the mixing industry, and for good reason. Sharpe takes great pride in making sure our equipment is manufactured and assembled to the highest standards.

We begin with raw materials of the best quality on the market. Sharpe has invested in long-term partnerships with material suppliers who are as committed to quality as we are. Our suppliers stand behind their products, offering material certifications when required.

Tight tolerances are followed through the machining and welding processes. Our machinists' biggest strengths

Sharpe Mixers President Jay Dinnison inspects a mixer. Strict standards are used.

are their cumulative level of experience and their expertise in special alloys.

Every large mixer must pass a thorough inspection by a design engineer before leaving our facility. All critical measurements are confirmed and documented, and all components checked for accuracy.

Digital photos are taken of all components, tags, nameplates, packaging, etc., and saved with the inspection documentation.

Sharpe's quality-control program is designed to guarantee that we meet or exceed customers' requirements.

The end result of all this effort? A product we are proud of and one you can have utmost confidence in!

How may we design your mixer? [Contact us today!](#)
